Important information:

- The selection of components such as the tube, the fabric and the load bar and any other accessories is the responsibility of the manufacturer and /or installer.
- The manufacturer of the complete solution is responsible for the complete test of the FTS system and must ensure that all the components are compatible with one another.
- All instructions must be followed closely regardless of the system's specification. Failure to do so shall absolve Somfy of any responsibility and void the warranty.
- The technical details of each product are available and can be supplied by Somfy's technical services.

FTS system operating principle

FABRIC TENSION SYSTEM
ELECTRONIC BOX

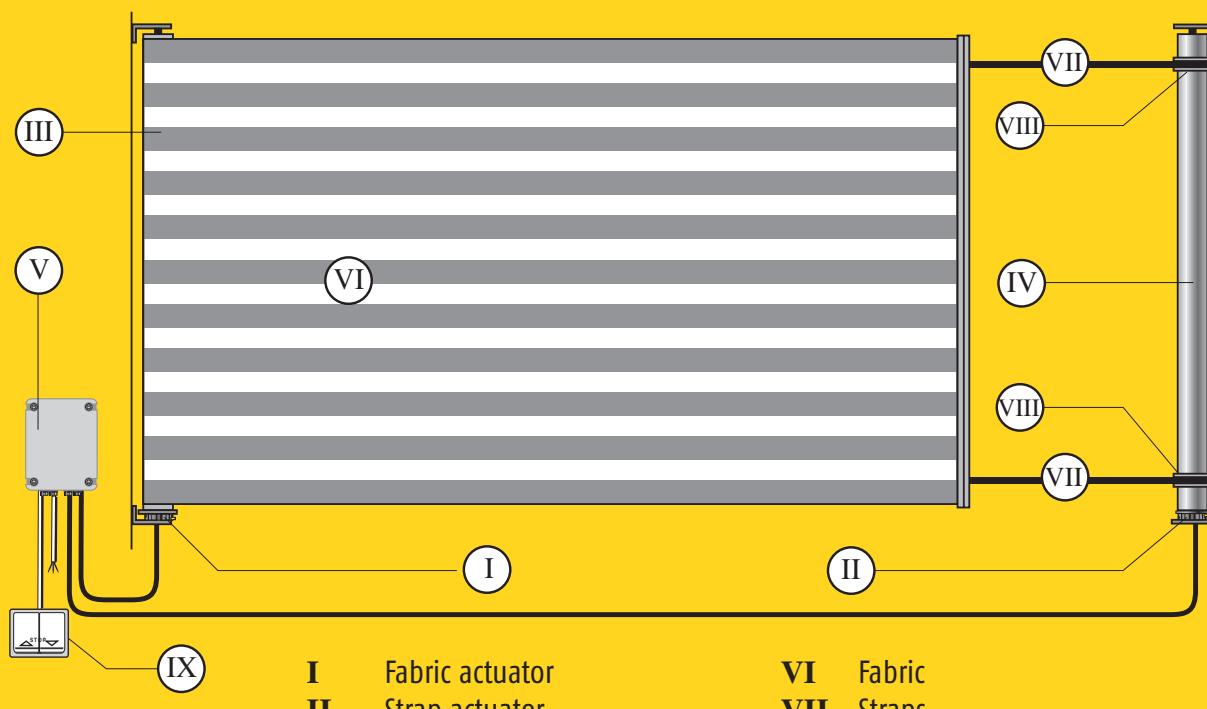

The FTS is a complete system. It comprises two FTS actuators, a control unit and accessories needed for installation (brackets, adaptors, etc.) and operation (control system).

The FTS is suited to horizontal protection installations that require optimised tension of the fabric.

The control is performed using a double push button or a sun/wind automatic function or radio remote controls, etc.

Function

The principle of the FTS system is of a fabric placed between two motorised roller tubes that is held under tension at all times when being rolled and unrolled. The first actuator is located in the roller tube of the fabric, the second is in the roller tube of the strap. The tension of the fabric is regulated by the FTS control unit. This unit sends the tension commands to the actuators. The control unit has two types of fabric tension: dynamic tension that lasts the duration of the unwinding and the final tension after the actuators have stopped, at the end limit or following a "stop" command.

FTS system operating principle

The FTS Hi-Pro actuator

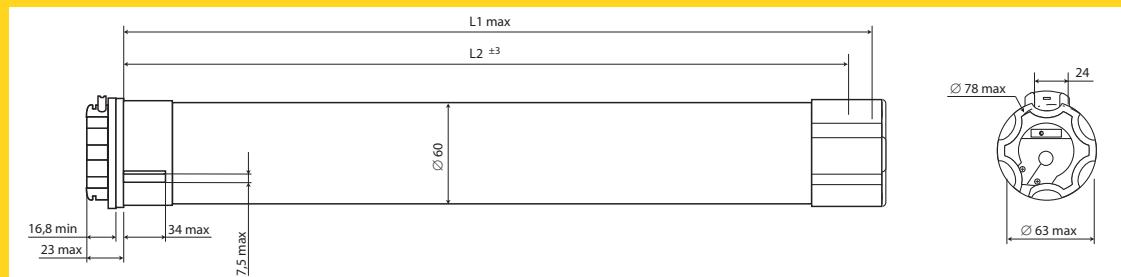

The FTS actuator is based on the LT50 or LT60 actuator, so it has the same general specifications of the other actuators of the Hi-Pro range, except:

- The brake power supply is independent of the electrical actuator (grey wire).
- The 5-conductor black RRF cable cannot be disconnected, length 1 or 2.5 metres.

For the other actuator ranges, contact Somfy's technical service department.

FTS system operating principle

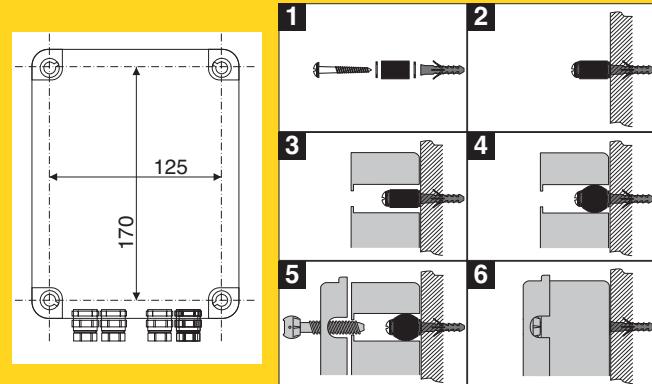

The control unit

- The FTS control unit allows the fabric and strap tension to be adjusted:
 - The dynamic tension makes it possible to brake the unrolling of the fabric or the straps while the system is in motion.
 - The final tension makes it possible to tighten the fabric perfectly when it stops moving.
- The FTS control unit uses a double push button (stop by pressing both push buttons) for automated operation or Somfy automated systems connected to dry contact pulsed outputs (potential-free).
- The safety function of the system when starting stops the system if one of the motors does not start after 1 second, either due to jamming or too much play in the installation.
- Compatible with control units, for example Soliris IB sun/wind automated functions or radio remote controls.
- Possibility of connecting a safety switch (normally closed switch).
- Thermal safety. Power supply of both actuators cut off in case of heat detection on one of the actuators.
- Output delay: 6 minutes.
- Brake: pressing this button releases the brakes of both actuators. The fabric is no longer taught and can be unrolled for assembly operations. The brake button can only be actuated for a maximum of 2 minutes.

Technical data, Europe range		
Housing	Material	ABS

Mounting the control box

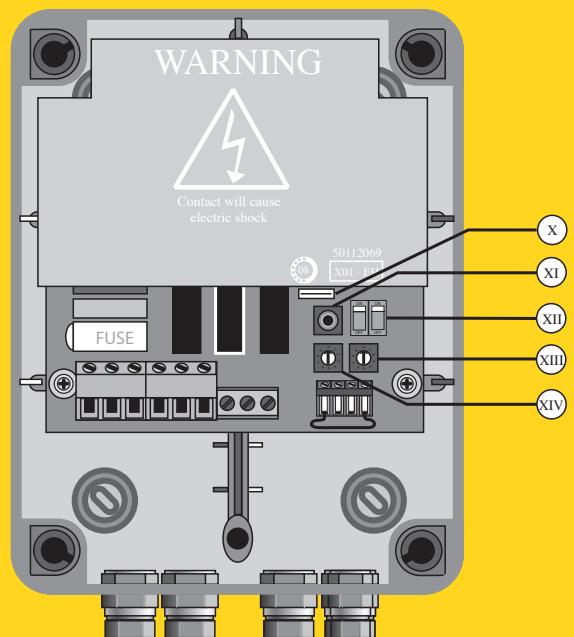

- Drill holes in the wall according to the drilling plan, and fit the screws with the rubber pad between the washers.
- Screw in until the clearance between the washers and the rubber pad has been eliminated.
- Position the box on the 4 screws.
- Tighten the screws until the rubber pads lock into the holes in the box.
- Install the cover after wiring.
- Tighten the screws.

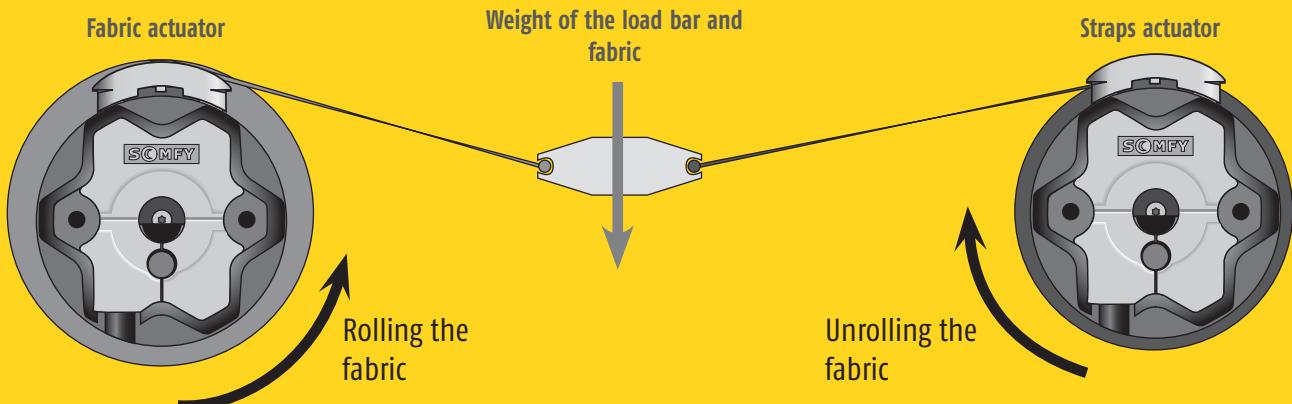

FTS system operating principle

Specifications

- **Individual one-touch control** via double push button. Compatible with SOMFY Soliris IB automated systems.
- **Symmetrical dynamic tension** (the preset dynamic brake will be applied to the straps actuator and the fabric actuator) or **dissymmetrical dynamic tension** (the preset dynamic brake will be applied to the straps actuator or the fabric actuator, depending on a dip switch selection). (XII)
- **Fabric dynamic tension** adjustable via potentiometer. (XIII)
- **Fabric final tension** adjustable via potentiometer. (XIV)
- **Safety contact**, e.g. for skylight, between terminals 10 and 13.
- **Thermal safety**: power supply of the actuators cut off in case of thermal cut-out detection on one of the actuators.
- **Simultaneous brake release**. (XI)
- **Delay on actuator outputs**: 6 min.
- **Power supply 50/60 Hz frequency setting**. (X)

Concept of adjustment when the fabric or straps are being unwound

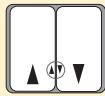

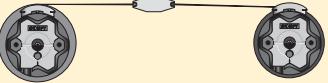

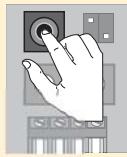

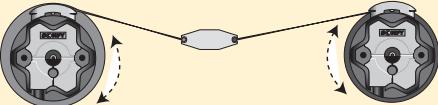

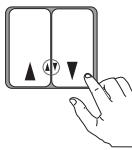

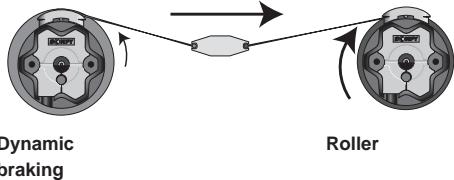

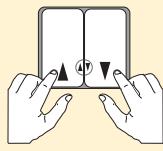

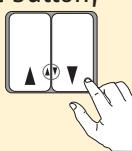

Movement	Fabric actuator	Straps actuator
Unrolling the fabric	the dynamic tension brakes the unrolling of the fabric	The actuator rolls the straps until the end limit
Rolling the fabric	The actuator rolls the fabric until the end limit	the dynamic tension brakes the unrolling of the straps

- After the fabric is unrolled or rolled, the system must be re-tensioned, this function is performed by the control unit, providing the final tension.
- The dynamic tension and final tension can be adjusted at the control unit to adapt them to the constraints of the installation:
 - Forward movement of the system
 - Rigidity of the load bearing structure
 - Exposure to the wind
 - etc.

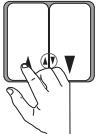

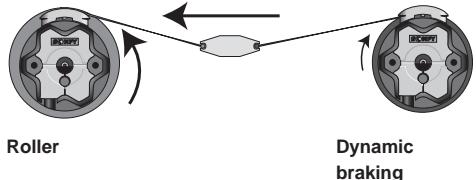

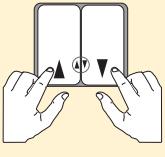

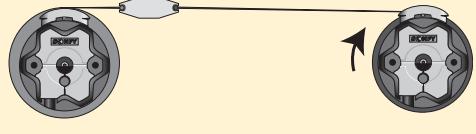

FTS system operating principle

Operation of the FTS

Control	Control unit	Actuators	Actuator power supply
 No order	On standby	The fabric + strap assembly remains mechanically tensioned. 	None
	Press the brake release button. 	The fabric and strap tubes can rotate freely: they will turn under the weight of the system or if they are rotated manually.  (free rotation of the two actuators)	Power supply to the fabric and strap actuator brakes while the release button is pressed. Note: this function must only be used for a technical operation on the FTS system.
Press (1/2 sec.) on the awning out button. 	Outputs timed until the end limit is reached or the "stop" command is made using the control.	The strap tube rolls the straps, the fabric tube brakes the fabric to prevent it from sagging too much (dynamic tension).  Dynamic braking Roller	Power supply: <ul style="list-style-type: none">for the 2 actuator brakes.for the strap actuator in the direction that corresponds to the rolling of the straps.for the fabric actuator at reduced tension (dynamic tension).
Press both buttons,  or on the awning out button,  or stop at end limit of the system.	Output timed by the final tension setting.	The strap tube is locked, the fabric tube rolls the fabric to tension it for the duration of the final tension delay. 	Power supply: <ul style="list-style-type: none">for the fabric actuator brake.for the fabric actuator in the direction that corresponds to the rolling of the fabric.

FTS system operating principle

Operation of the FTS

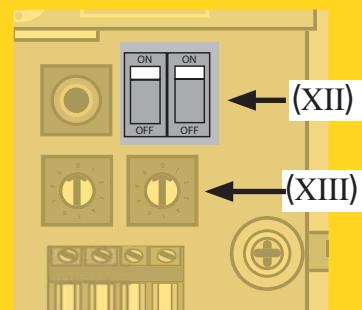

Control	Control unit	Actuators	Actuator power supply
Press (1/2 sec.) on the awning in button. 	Outputs timed until the end limit is reached or the "stop" command is made using the reverse control.	The fabric tube rolls the fabric, the strap tube brakes the straps slightly to prevent excessive sagging (dynamic tension). 	<p>Power supply:</p> <ul style="list-style-type: none"> for the 2 actuator brakes. for the fabric actuator in the direction that corresponds to the rolling of the fabric. for the strap actuator at reduced tension (dynamic tension).
Press both buttons,  or on the awning out button,  or stop at end limit of the system.	Output timed by the final tension setting. FTS system operating principle

Setting the symmetric / asymmetric tension

This setting is entirely linked to the way the system has been fitted.

- Symmetrical tension of the fabric should be selected for horizontal installations.
- Asymmetric tension of the fabric should be selected for certain installations to fit special cases, **that have the prior approval of Somfy's technical services.**

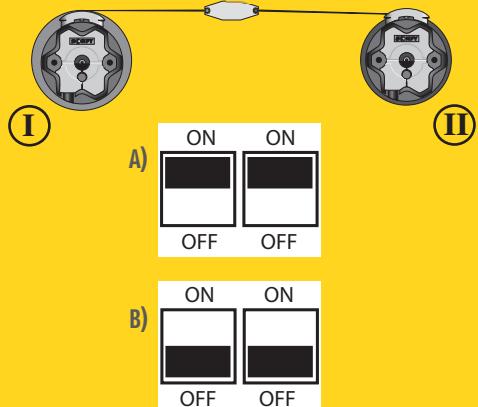

Symmetric tensioning of the fabric:

A) When the dipswitches (XII) are in the ON/ON position, the braking effect is active, for the two actuators (fabric actuator and strap actuator), according to the potentiometer setting (XIII).

This is the factory setting for standard cases.

B) When the dipswitches (XII) are in the OFF/OFF position, the braking effect is in the minimum range for the two actuators (fabric and strap actuators).

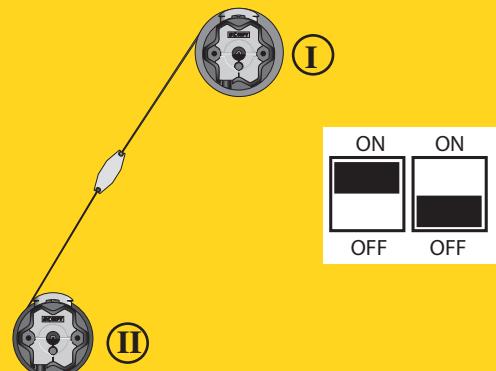

This setting requires prior approval by Somfy's technical services.

Asymmetric tension of the fabric, fabric actuator at the top:

When the dipswitches (XII) are in the ON/OFF position, the braking effect is active for the fabric actuator according to the potentiometer setting (XIII) and the braking effect is at the minimum setting for the strap actuator.

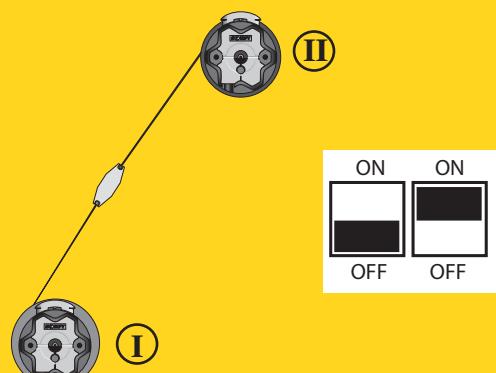

This type of installation requires prior approval by Somfy's technical services.

Asymmetric tension of the fabric, fabric actuator at the bottom:

When the dipswitches (XII) are in the OFF/ON position, the braking effect is active for the strap actuator according to the potentiometer setting (XIII) and the braking effect for the fabric actuator is at the minimum setting.

This type of installation requires prior approval by Somfy's technical services.

(I) Fabric actuator

(II) Straps actuator

FTS system operating principle

Setting the dynamic tension of the fabric (braking effect during unrolling)

To achieve an optimum setting, first set the potentiometer (XIII) to 0, then adjust the potentiometer gradually until the fabric is slightly tensioned when being rolled up and unrolled (too much dynamic tension will inhibit the operation of the system).

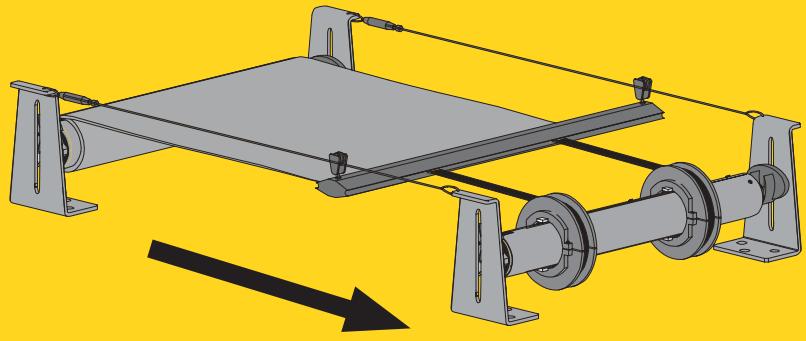

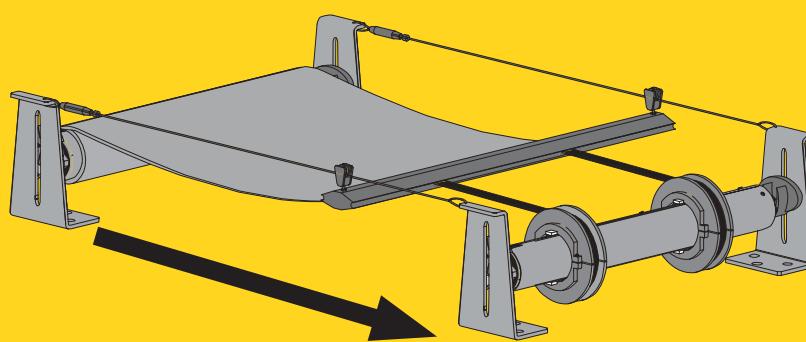

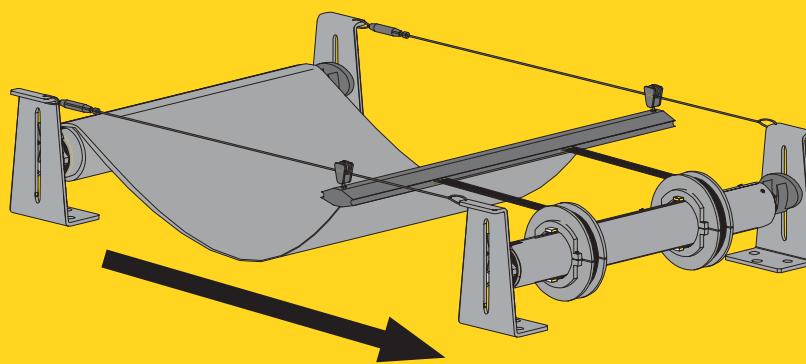

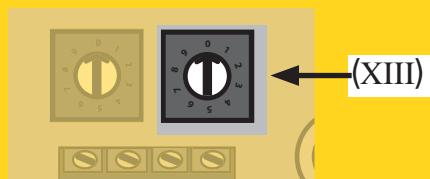

N.B.: the tension of the fabric will vary when the actuators are hot (the "thermal time" of the FTS actuators is on average 8 minutes for FTS LT50 actuators and 7 minutes for FTS LT60 actuators).

Note: this setting must be made after having selected the symmetric/asymmetric tension that corresponds to the installation and once the actuator end stops have been set (see previous page).

- Request fabric feed-out: during unwinding, the fabric actuator brakes the fabric very gently.

If the fabric unwinds too quickly, it will sag:

Using a flat-blade screwdriver, gradually increase the potentiometer value (XIII) to limit the sag of the fabric.

High stress on the structure!

FTS system operating principle

Adjusting the final tension

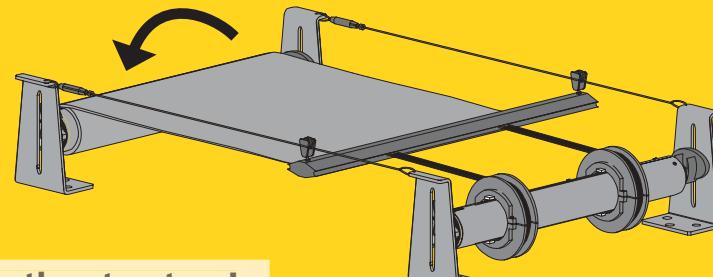

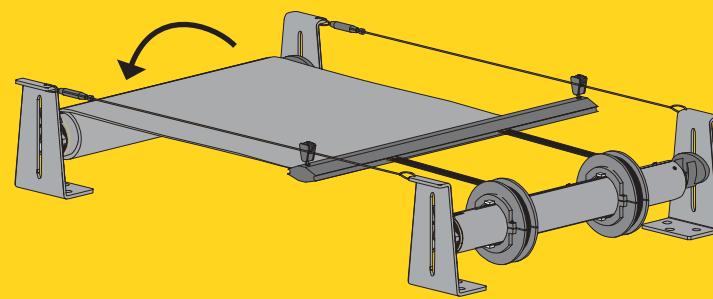

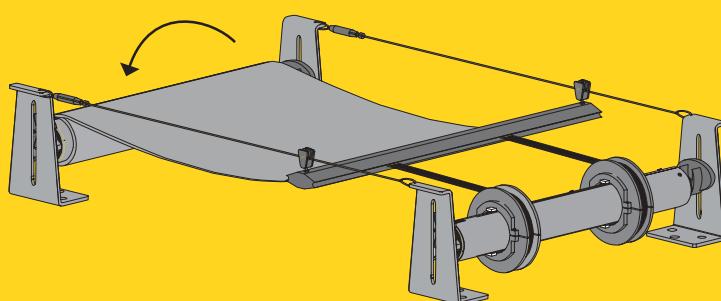

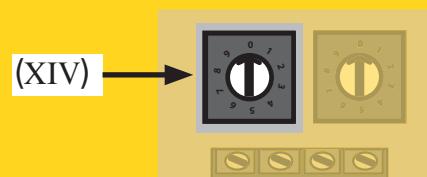

The final tension is always applied after the actuators have stopped at the end limits or after a "STOP" command has been made. The final tension will vary in strength according to the temperature of the actuators.

To achieve the optimum setting, first set the potentiometer (XIV) to 0, then gradually increase the potentiometer value until the fabric is correctly tensioned.

N.B.: the tension of the fabric will vary when the actuators are hot (the "thermal time" of the FTS actuators is on average 8 minutes for FTS LT50 actuators and 7 minutes for FTS LT60 actuators).

Note: This setting must be made after the end stops of the FTS actuators have been set as well as the symmetrical / asymmetric tension.

- Request fabric feed-out/in, followed by a "stop" order:
the system will stop, and then re-tension the fabric.
Perform various tests, gradually increasing the potentiometer value
(XIV), until you obtain a correct fabric tension.

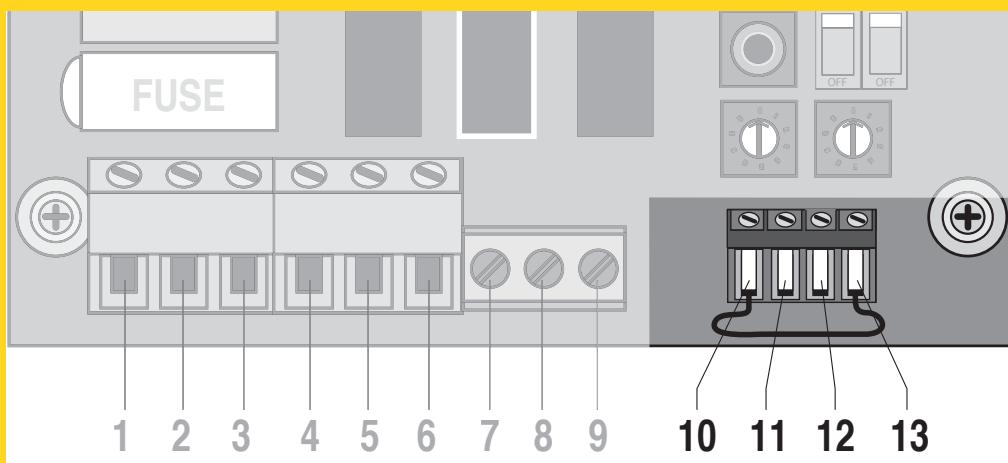

High stress on the structure!

FTS system operating principle

Safety switch

If, for example, a window is located in the area covered by the fabric, a safety switch should be fitted (normally closed switch) to protect the installation.

If there is no safety switch, the jumper (factory fitted) must remain between terminals 10 and 13.

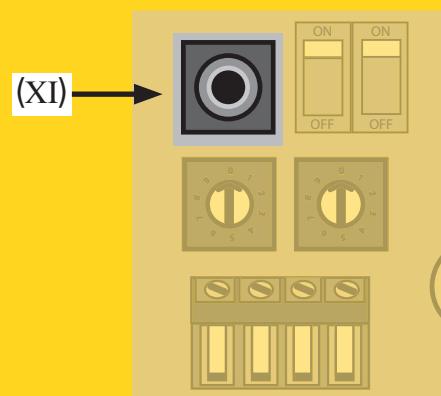

Simultaneous releasing of the brakes

Push button (XI) simultaneously activates the supply to the brakes on both actuators.

This operation eases the system tension, for example in order to adjust its parallel alignment.

N.B.: holding push button (XI) down too long (>1 minute) could damage the actuator brakes.

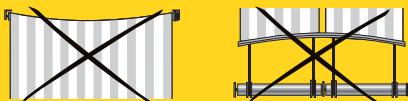

Advice on installing the FTS system

- The FTS system is entirely dedicated to sun protection.
- The selection charts are designed for horizontal shading or on a very slight incline (5 % max).
For a different application, please contact a Somfy technician who will study the feasibility of your installation with you (screen at high incline, vertical system, system with bevel gear, etc.)
- The FTS system requires correct mechanical and electrical fitting, which includes:
 - Parallel motorised shafts that are always fixed horizontally.

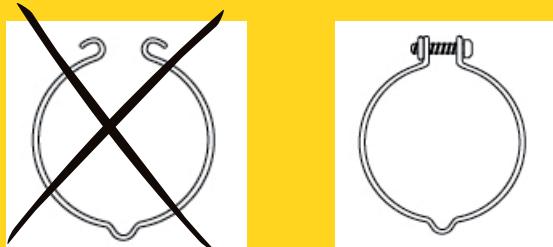

- Rigid tubes and load bar (minimal flex).

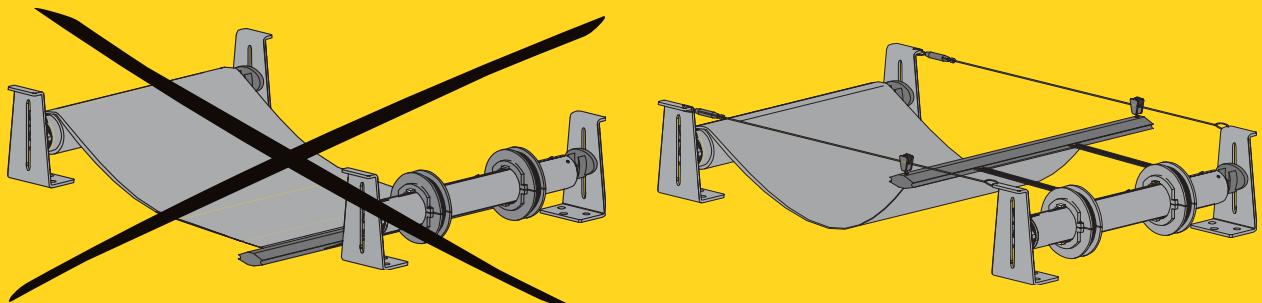

- A pre-stretched fabric (no stretching over time) that is well sewn or welded: the FTS system must be used with fabric that offers good dimensional stability and resists deforming in the direction of the frame (pre-stretched acrylic or polyester fabric for example).
- Equal length and parallel straps.
- Protection against water ingress in the actuator heads, the electrical connections and the control system.
- An electrical installation that conforms to the applicable standards (NF C 15-100, NFC 73-800).
- For effective protection from rain, the button covers must be refitted to the actuator setting buttons.
- For effective protection from rain, it is strongly recommended that the roller tubes be protected with a head rail.

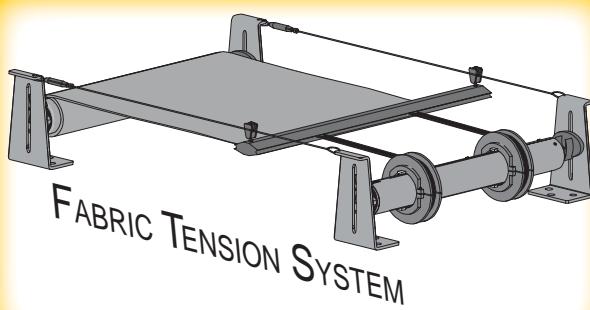

The FTS Hi-Pro actuators must always be fitted with the locking ring part no. 910002, to prevent the risk of the system falling (heavy strains on the supports).

The load bar must be guided so that its weight does not interfere with the FTS system.

1. Introduction to the FTS system

- The FTS is a complete system comprising 2 actuators and a control box.
- This system is used for unwinding fabric between 2 tubes, while controlling the tension.
- The fabric is unwound via a strap-drawn load bar to which the fabric is attached.
- One of the actuators is housed in the tube on which the fabric winds and unwinds. The other is housed in the opposite tube on which the straps wind and unwind, by means of the guidance pulleys.
- The operation of the 2 actuators is co-ordinated via a special control box, which also ensures:*
 - Dynamic fabric tension as it unwinds/winds.*
 - An end fabric tension.*

I Fabric actuator
II Strap actuator

2. Actuator specifications

- SOMFY HiPro-FTS 50 and FTS 60 actuators
 - FTS 50: tube min. Ø 50 mm
 - FTS 60: tube min. Ø 63 mm

Note: for the choice of actuators, refer to the FTS charts.

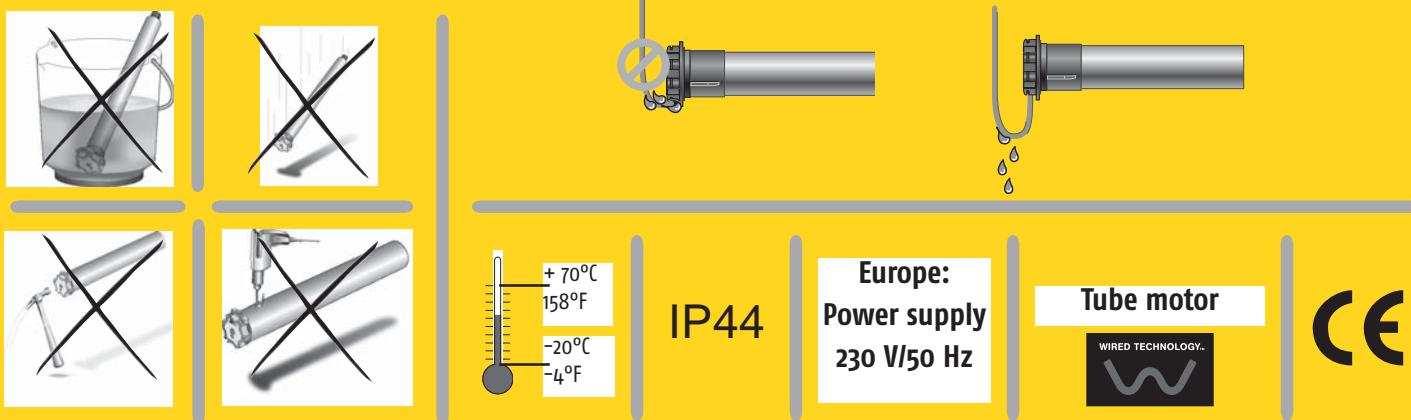

- Quick setting of the end limits.
- 6 options for actuator head orientation.
- Fitting SOMFY HiPro LT 50 and LT 60 adaptors.
- 2-way actuator, with electric brake release (5 conductor wire).
- 1 m or 2.5 m RRF anti-UV black cable, non removable, 5 x 0.75 mm².

"Europe" actuator range

FTS Range	Torque Nm	Speed Rpm	End limit switch capacity
LT 50	25	17	46 turns
LT 60	55	17	35 turns
LT 60	70	17	35 turns

3. Recommendations for the actuators

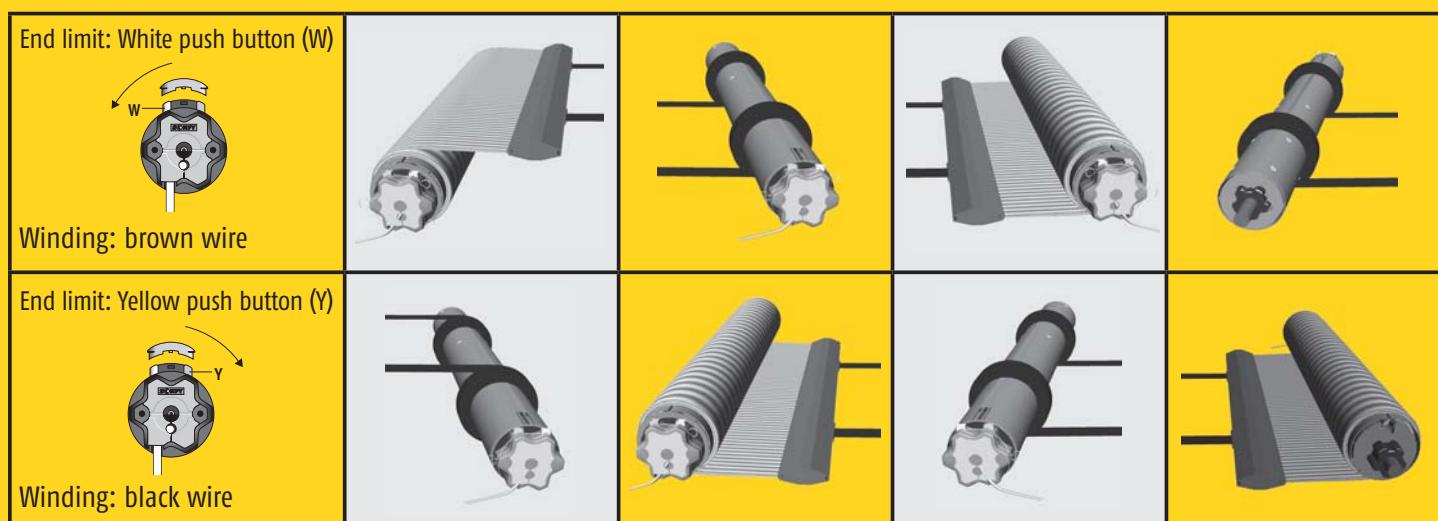

4. Installation configurations

There are various possible installation configurations according to:

- The actuator positioning (head on right or left).
- The winding direction of the fabric or strap. (Overwinding or underwinding).

These different configurations require specific setting of the end limits and appropriate connection.

Examples of configurations:

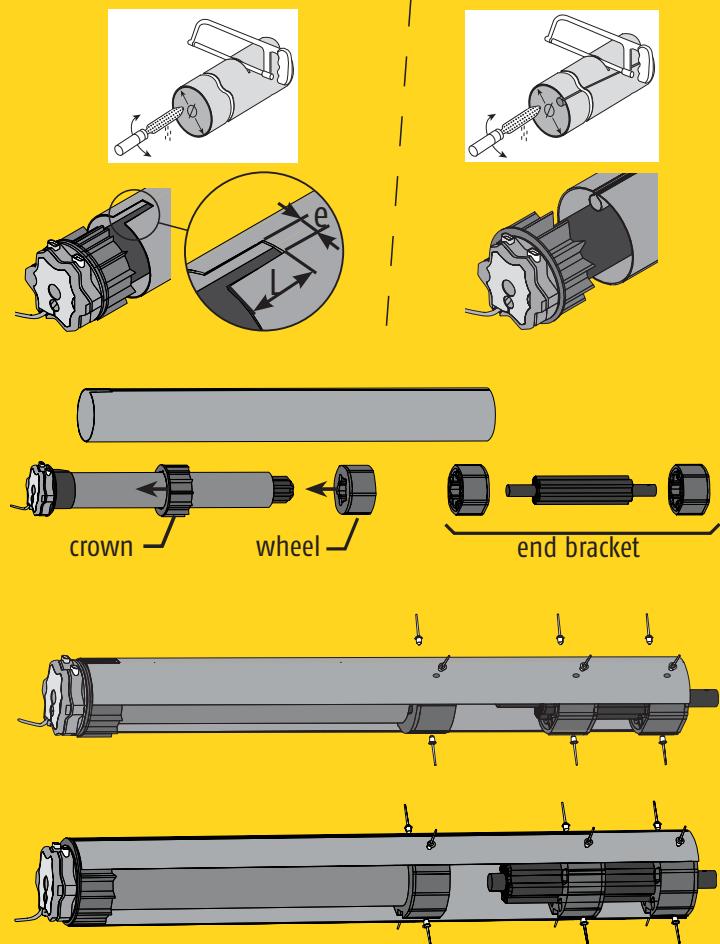

FTS system installation guide

5. Preparing the roller tubes

1. Prepare the straps and fabric roller tubes.

- **FTS 50:** $\varnothing \geq 47 \text{ mm (1.85 in)}$
th. = 4 mm (0.16 in)
 $L = 25 \text{ mm (0.98 in)}$
- **FTS 60:** $\varnothing \geq 60 \text{ mm (2.36 in)}$
th. = 8 mm (0.32 in)
 $L = 35 \text{ mm (1.38 in)}$

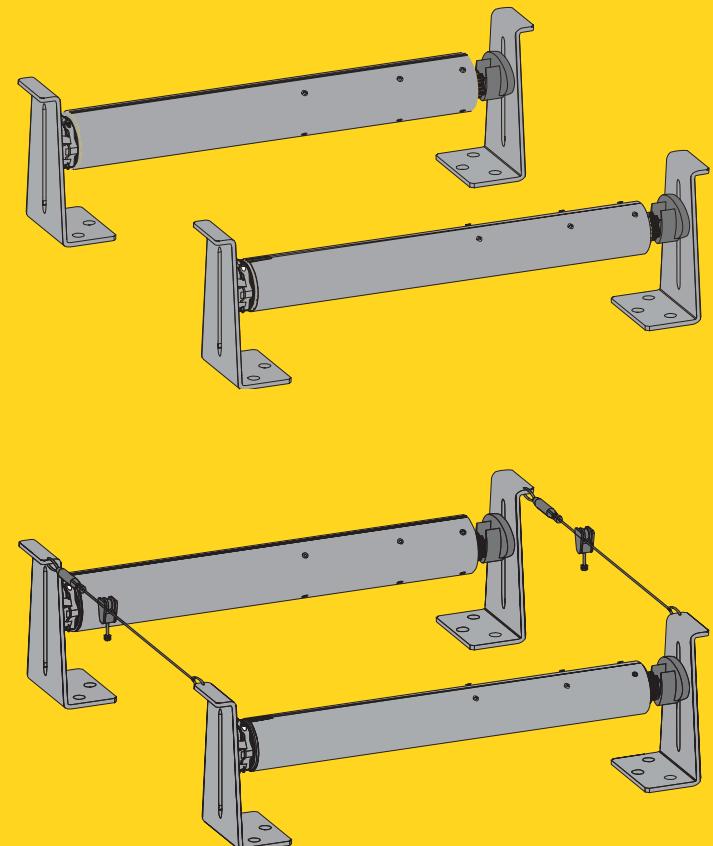

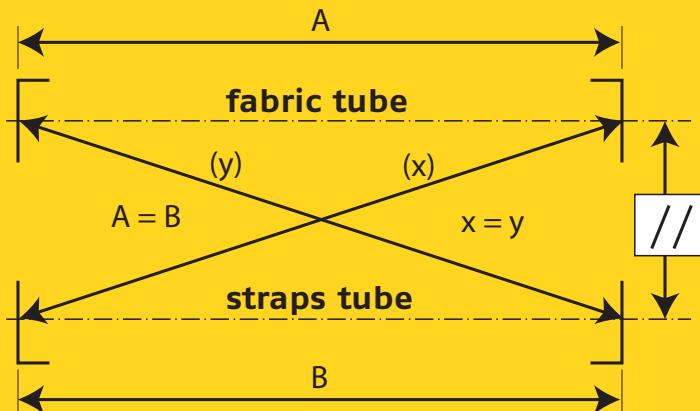

2. Assemble the roller tube for the straps.

Fasten the actuator wheel and the two end bracket wheels with 4 steel pop rivets $\varnothing 4 \text{ mm}$ at 90° for each wheel.

3. Assemble the fabric roller tube.

Fasten the actuator wheel and the two end bracket wheels with 4 steel pop rivets $\varnothing 4 \text{ mm}$ at 90° for each wheel.

4. Fit the roller tubes on the structure, making sure they are aligned in parallel.

6. Preparing the guidance system

1. Prepare the load bar guidance system.

FTS system installation guide

7. Preparing the fabric and straps

1. Press the end limit setting push buttons on both actuators, to put them into the setting position (push buttons engaged).
2. Attach and wind the fabric onto its roller tube (using setting tool ref.: 9137080).

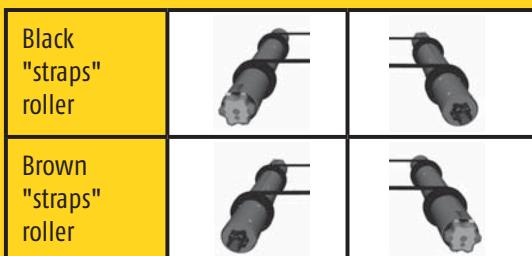

Note: The "dynamic tension" wire must be insulated with an electrical split fitting.

3. Mount the pulleys and straps, making sure that they are perpendicular to the roller tubes. Mount the load bar on its guidance system to prevent the fabric from sagging too much during the subsequent manoeuvres.

4. Wind the straps between the pulleys, using the setting tool ref.: 9137080.

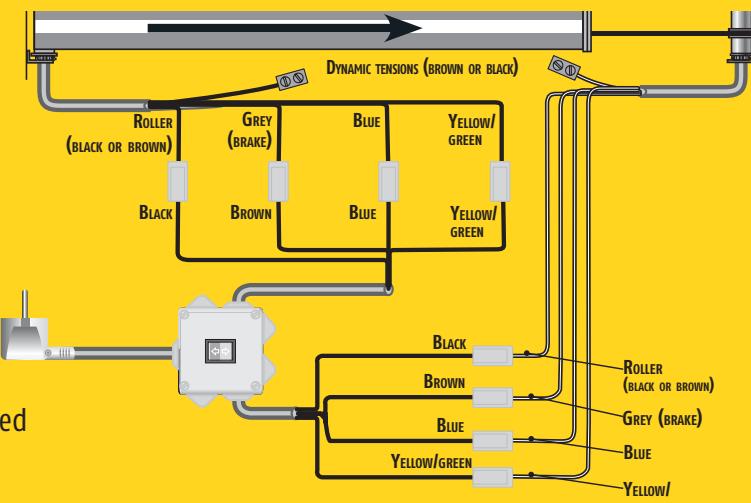

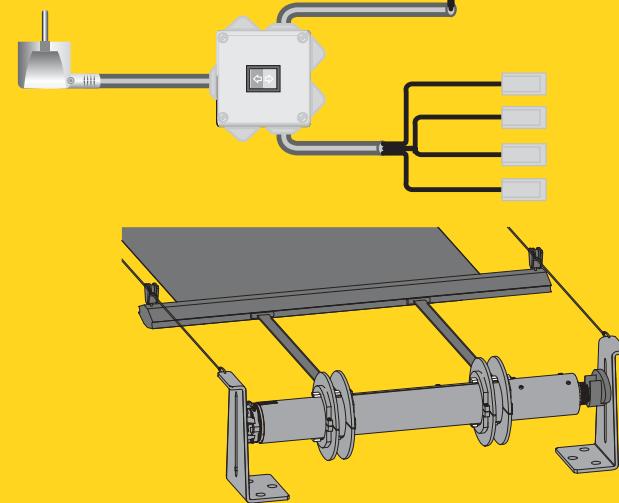

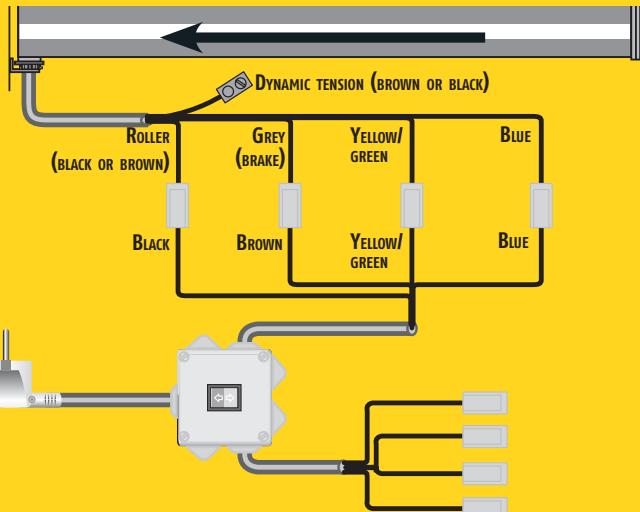

Note: The "dynamic tension" wires must be insulated with electrical split fittings.

8. Setting the actuator end limits

SETTING THE "STRAPS" END LIMIT

- Maintaining the wiring set up in section 7.4, unwind the fabric to the desired end limit.

- Press the strap winding push button on the straps actuator to return it to normal position.

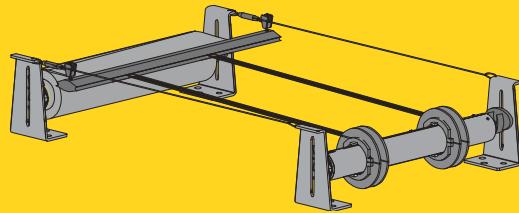

- Press the fabric motor push button which is not for winding the fabric, to return it to normal position.

SETTING THE "FABRIC" END LIMIT

- Maintaining the wiring set up in section 7.4, wind the fabric to the desired end limit.

- Press the fabric winding push button on the fabric actuator to return it to normal position.

- Press the push button which is still in the setting position on the straps actuator.

- Maintaining the wiring set up in section 7.4, perform an out & back movement to check the end limits, then unplug the setting tool from the power supply before disconnecting the actuators.

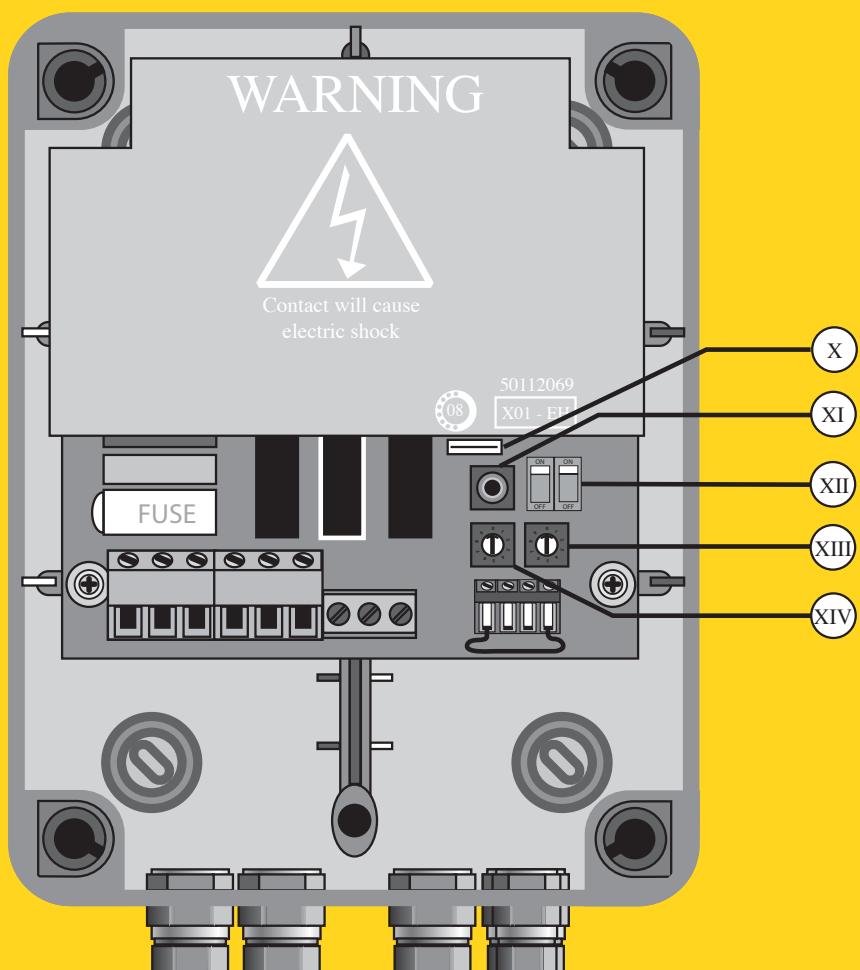

Never leave an end limit push button depressed when setting is carried out.

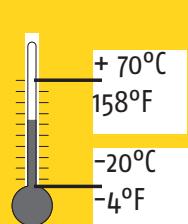

FTS system installation guide

9. Control box specifications

- IP56 waterproof box: 190 x 145 x 80 mm.
- Equipped with 5 packing glands.
- Functions:
 - **Individual one-touch control** via double push buttons. Compatible with SOMFY Soliris IB automated systems.
 - **Symmetrical dynamic tension** (the preset dynamic brake will be applied to the straps actuator and the fabric actuator) or **dissymmetrical dynamic tension** (the preset dynamic brake will be applied to the straps actuator or the fabric actuator, depending on a dip switch selection). (XII)
 - **Fabric dynamic tension** adjustable via potentiometer. (XIII)
 - **Fabric final tension** adjustable via potentiometer. (XIV)
 - **Safety contact**, e.g. for skylight, between terminals 10 and 13.
 - **Thermal safety**: actuator power supply cut off in case of heat detection on one of the actuators.
 - **Simultaneous brake release**. (XI)
 - **Delay on actuator outputs**: 6 min.
 - **Power supply 50/60 Hz frequency setting**. (X)

10. Recommendations for the control box

IP56

Europe:

FTS system installation guide

14. Adjusting the dynamic tension

- The dynamic tension prevents the fabric and straps from unwinding too quickly due to the weight of the load bar. In a conventional set-up (horizontal or very slightly sloping system), it is identical in both operating directions (symmetrical tension), which corresponds to the factory configuration of the dip switches (XII):

- In certain cases, such as a steep inclination, it is possible to alter the position of the dip switches (XII), to obtain a low or dissymmetrical dynamic tension. These set-ups should be validated with Somfy's technical service.
- The dynamic tension then needs to be adjusted using the potentiometer (XIII), graduated from 0 to 9.
- Request fabric feed-out: during unwinding, the fabric actuator brakes the fabric very gently. If the fabric unwinds too quickly, it will sag:
Using a flat-blade screwdriver, gradually increase the potentiometer value (XIII) to limit the sag of the fabric.

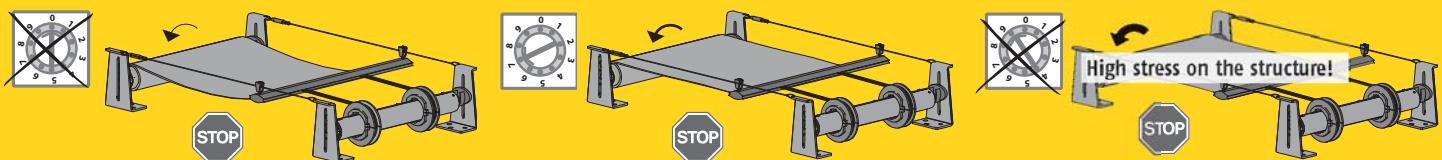

- Request fabric retraction: if the straps unwind too quickly (sag) or too slowly (high tension), readjust the potentiometer value (XIII).

15. Adjusting the final tension

The final tension is set automatically by the control box, after every end limit stop or after a STOP request. The final tension needs to be adjusted on the potentiometer (XIV), graduated from 0 to 9.

- Request fabric feed-out, followed by a "stop" order: the system will stop, and then tension the fabric slightly. Perform various tests, gradually increasing the potentiometer value (XIV), until you obtain a correct tension.
N.B.: too high a final tension may weaken the structure!

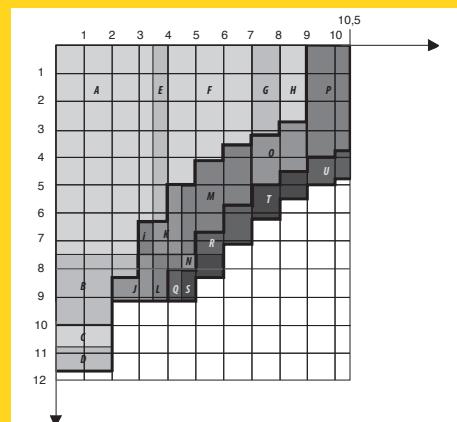

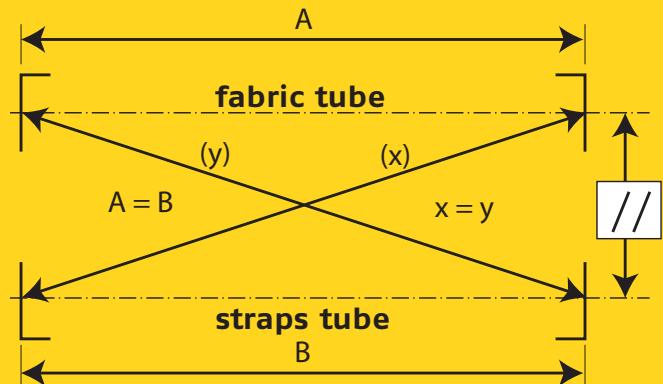

16. Simultaneous brake release

Push button (XI) simultaneously activates the supply to the brakes on both actuators. This operation eases the system tension, for example in order to adjust its parallel alignment. N.B.: holding push button (XI) down too long (>1 minute) could damage the actuator brakes.

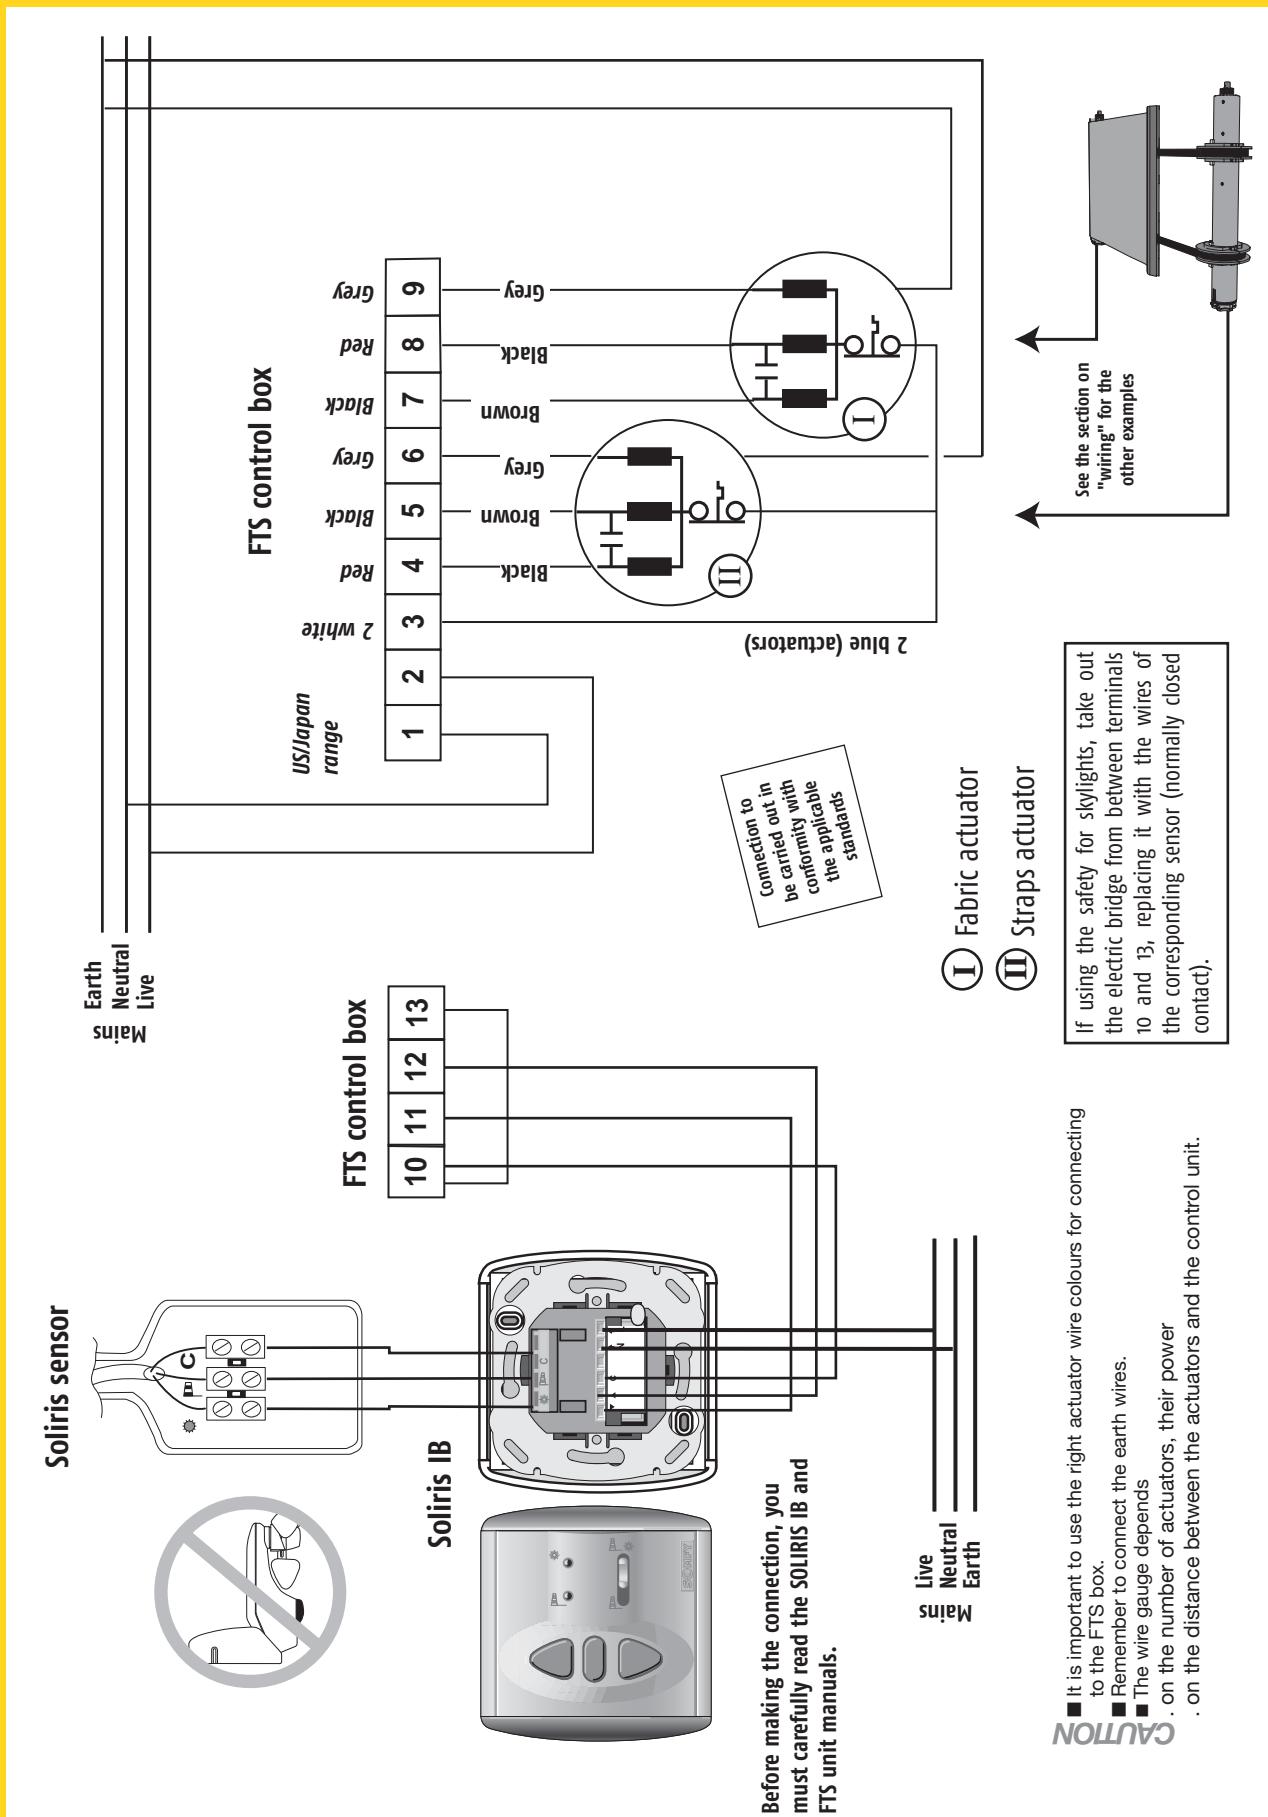

17. Repairs

- The FTS is not working:
 - Check the power supply (circuit breaker + control box fuse)
 - Check for the electric bridge between terminals 10 and 13 of the control box, or make sure that the safety contact is properly closed.
 - Press the end limit setting push buttons on both actuators, to put them into setting position (push buttons engaged), if they are at the end limit in both directions.
- The FTS stops during a manoeuvre and will not work:
 - If the thermal safety on one of the actuators has been triggered, you need to wait around 1/2 hour before operating the FTS again.
 - If the problem persists, disconnect the actuators from the control box to test them with the setting tool.
 - Check the power supply (circuit breaker + control box fuse).
- The system only starts after 2 or 3 presses on the control system:
 - This problem is due to mechanical clearance on a load-bearing component; indeed the time between the request being made on the control system and the actuator being released from its end limit must not exceed 1.1 seconds.
- The fabric winds onto the tube in a spiral:
 - Make sure that the edges of the fabric are perpendicular to the roller tube and the load bar.
 - Make sure that the straps are perpendicular to the roller tube and the load bar.
- The fabric unwinds jerkily and the actuators seem to be abnormally forced (noisy):
 - Reduce the dynamic tension on the potentiometer (XIII).
 - Make sure that the guidance system is not generating excessive stress.
- Whenever it is stopped, the system seems to strain the structure abnormally:
 - Reduce the final tension on the potentiometer (XIV).
 - Make sure that the actuators used are those recommended on our charts.

Before making the connection, you must carefully read the universal receiver, Eolis RTS sensor, GR3 module and FTS unit manuals.

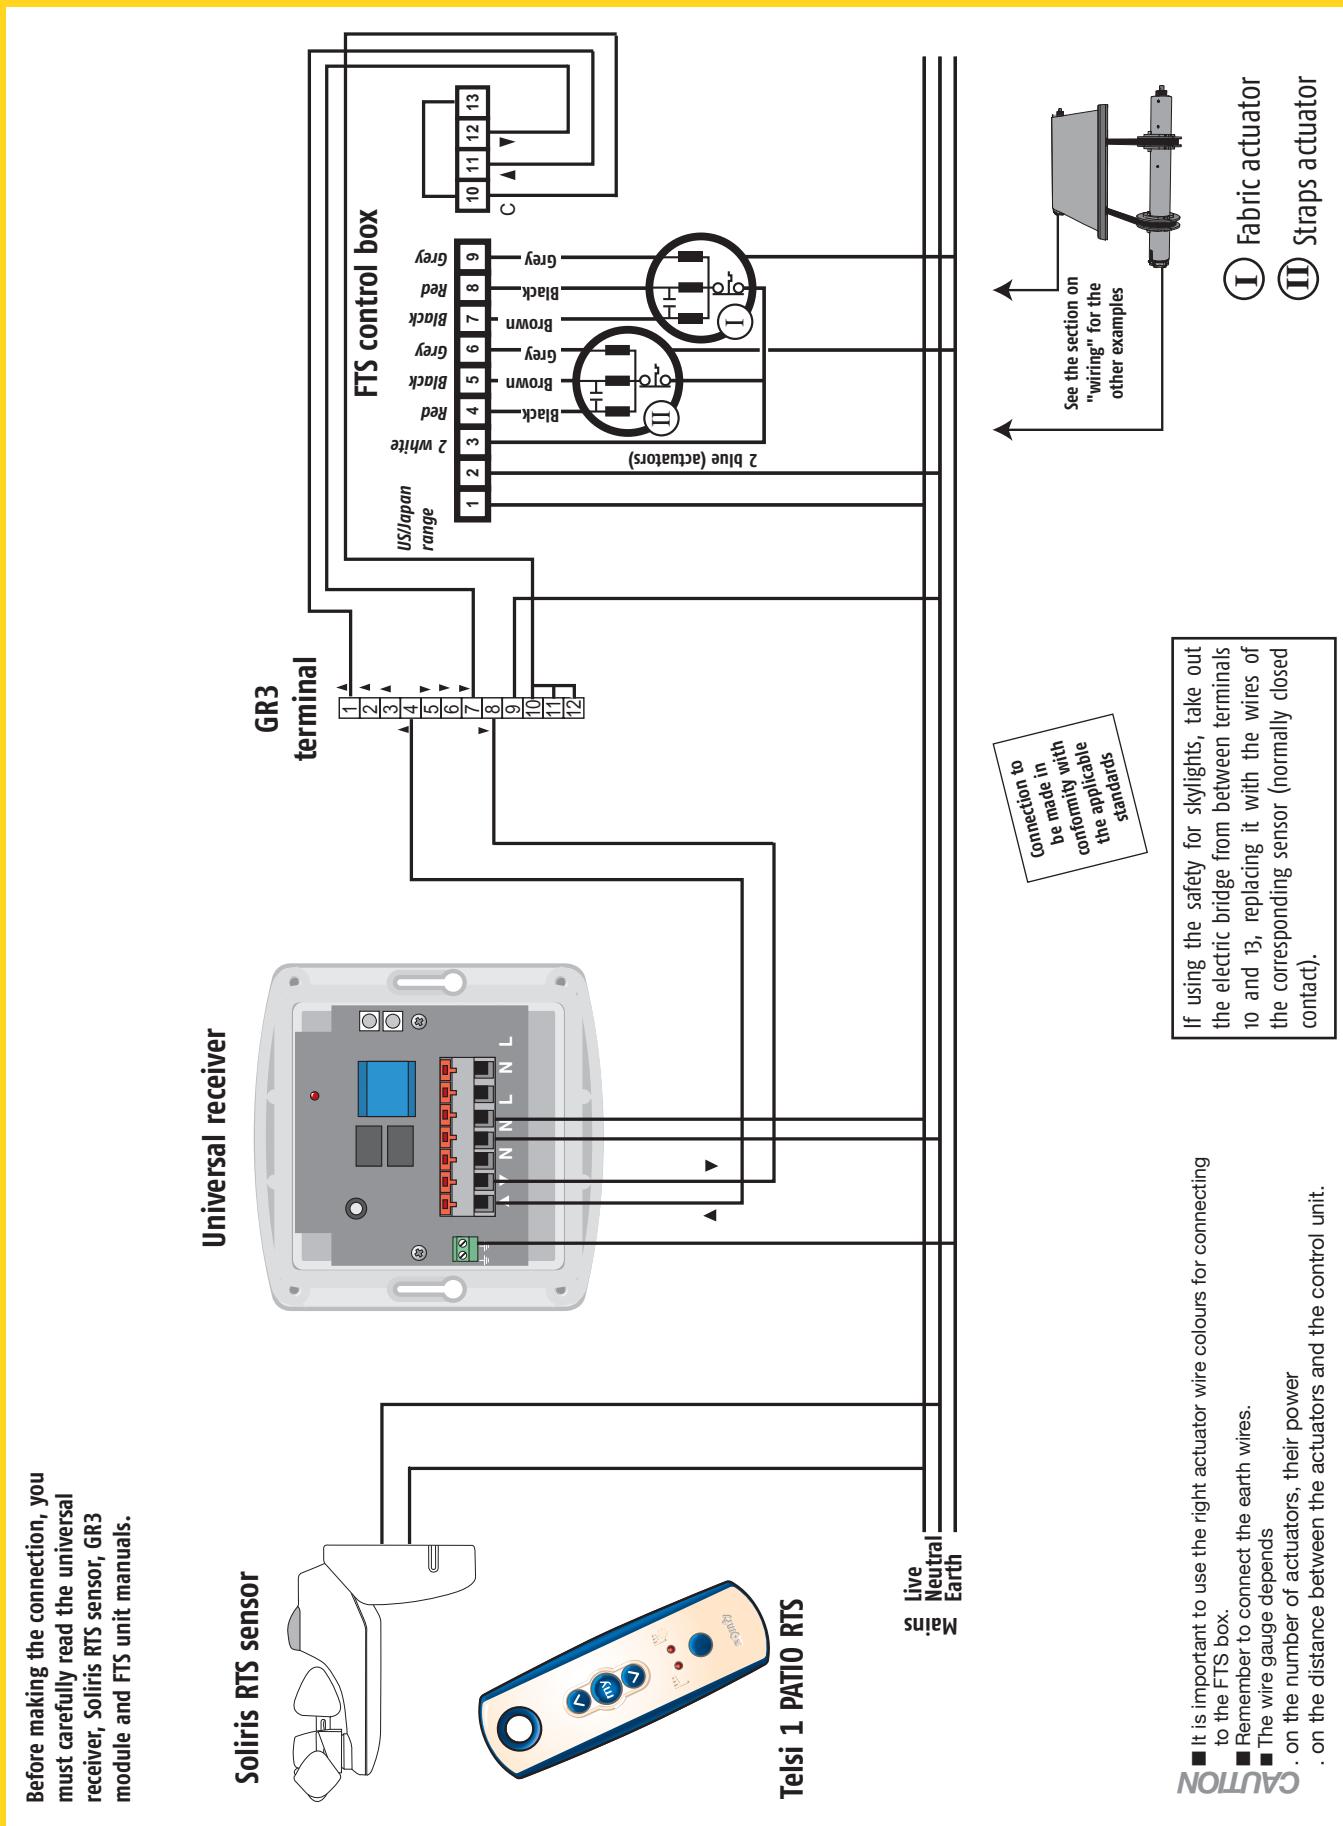

- CALUTION**
- It is important to use the right actuator wire colours for connecting to the FTS box.
 - Remember to connect the earth wires.
 - The wire gauge depends on the number of actuators, their power . on the distance between the actuators and the control unit.

If using the safety for skylights, take out the electric bridge from between terminals 10 and 11, replacing it with the wires of the corresponding sensor (normally closed contact).

- It is important to use the right actuator wire colours for connecting to the FTS box.
 - Remember to connect the earth wires.
 - The wire gauge depends on the number of actuators, their power . on the distance between the actuators and the control unit.

LT50 / LT60 brackets

Product	Comments
Bracket to be fixed to wall or ceiling 9420604	To be used with a universal bracket Max: FTS60 55/17. Mounting centre-to-centre distance: 49 and 98 mm/ ø10. Supplied in bulk.
Bracket LT FTS50 and 60 9430600	Max: FTS60 70/17. Mounting centre-to-centre distance: from 50 to 100 mm with M10 bolt.
Actuator bracket FTS LT50/60 9430601	Max: FTS60 70/17. Mounting centre-to-centre distance: from 50 to 100 mm with M10 bolt. Mazac universal bracket supplied with screws.
Adjustable plate with lockable ring 9763702	Max: FTS60 55 Nm.
Mazac universal bracket + lockable ring 9910003	Max: FTS60 70 Nm. Mounting centre-to-centre distance: 48 and 60 mm. Supplied with no screws.
Universal bracket 9910007	Max: FTS60 70 Nm. Mounting centre-to-centre distance: 48 and 60 mm. Supplied with mounting screws.
Lockable ring 9910002	Max: FTS60 70Nm.

Wheel stop LT50 9910004 	Supplied in a bag with a bolt. Max: FTS LT50 25/17.
FTS setting tool 9137080 	For LS 40, LT 50 and LT 60 motors. Length 3m.

FTS charts (230v/50hz range motors)

- The FTS system is entirely dedicated to sun protection.
- The selection charts are designed for horizontal shading or on a very slight incline (5 % max).

For a different application, please contact a Somfy technician who will study the feasibility of your installation with you (screen at high incline, vertical system, etc.)

1. Selection of actuators and tubes

The power of the actuators must be adapted to the solidity of the support structure:

- Veranda type light structure: FTS LT50 25/17 only.
- Rigid structure: FTS LT50 25/17 (25 m² max), FTS LT60 55/17 (40 m² max) or FTS LT60 70/17 (50 m² max).

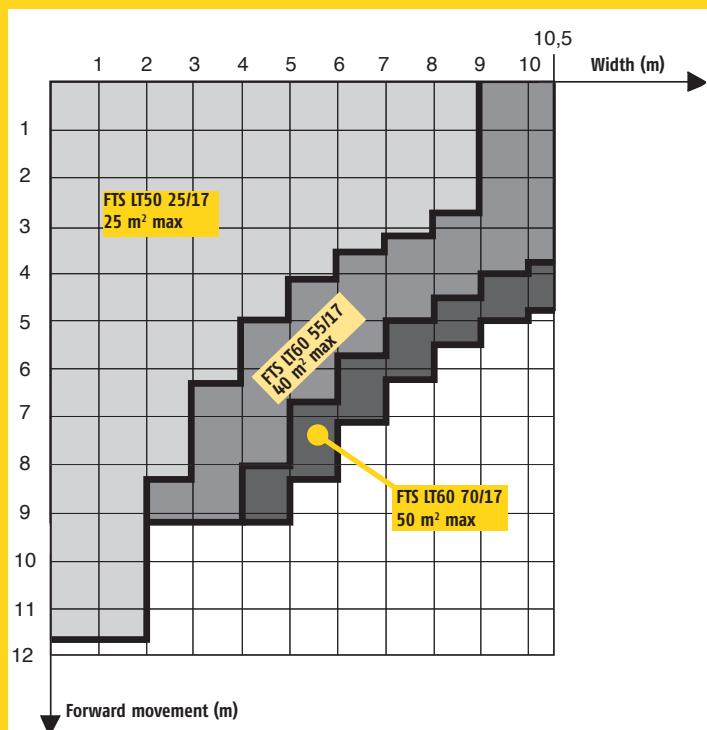

FTS LT50 25/17: strap tube Ø 63 x 1.5 mm smooth
 fabric tube Ø 70 grooved

FTS LT60 55/17: strap tube Ø 63 x 1.5 mm smooth
 fabric tube Ø 78 grooved

2. Accessory selection

- Guiding is necessary for all forward movement.
- Pulleys Ø 130 mm up to 5 m forward movement.
- Pulleys Ø 160 mm up to 9 m forward movement.
- Pulleys Ø 175 mm up to 12 m forward movement.

Note: The maximum capacity of the end limit cage of the FTS LT50 25/17 is 46 turns, which allows 11.7 m of fabric to be coiled on a Ø 70 mm tube.

Selection chart for the Europe range

3. Intermediate supports

Beyond a certain width, it is necessary to split the roller tubes, the load bar and the fabric to avoid heavy flexing of the system.

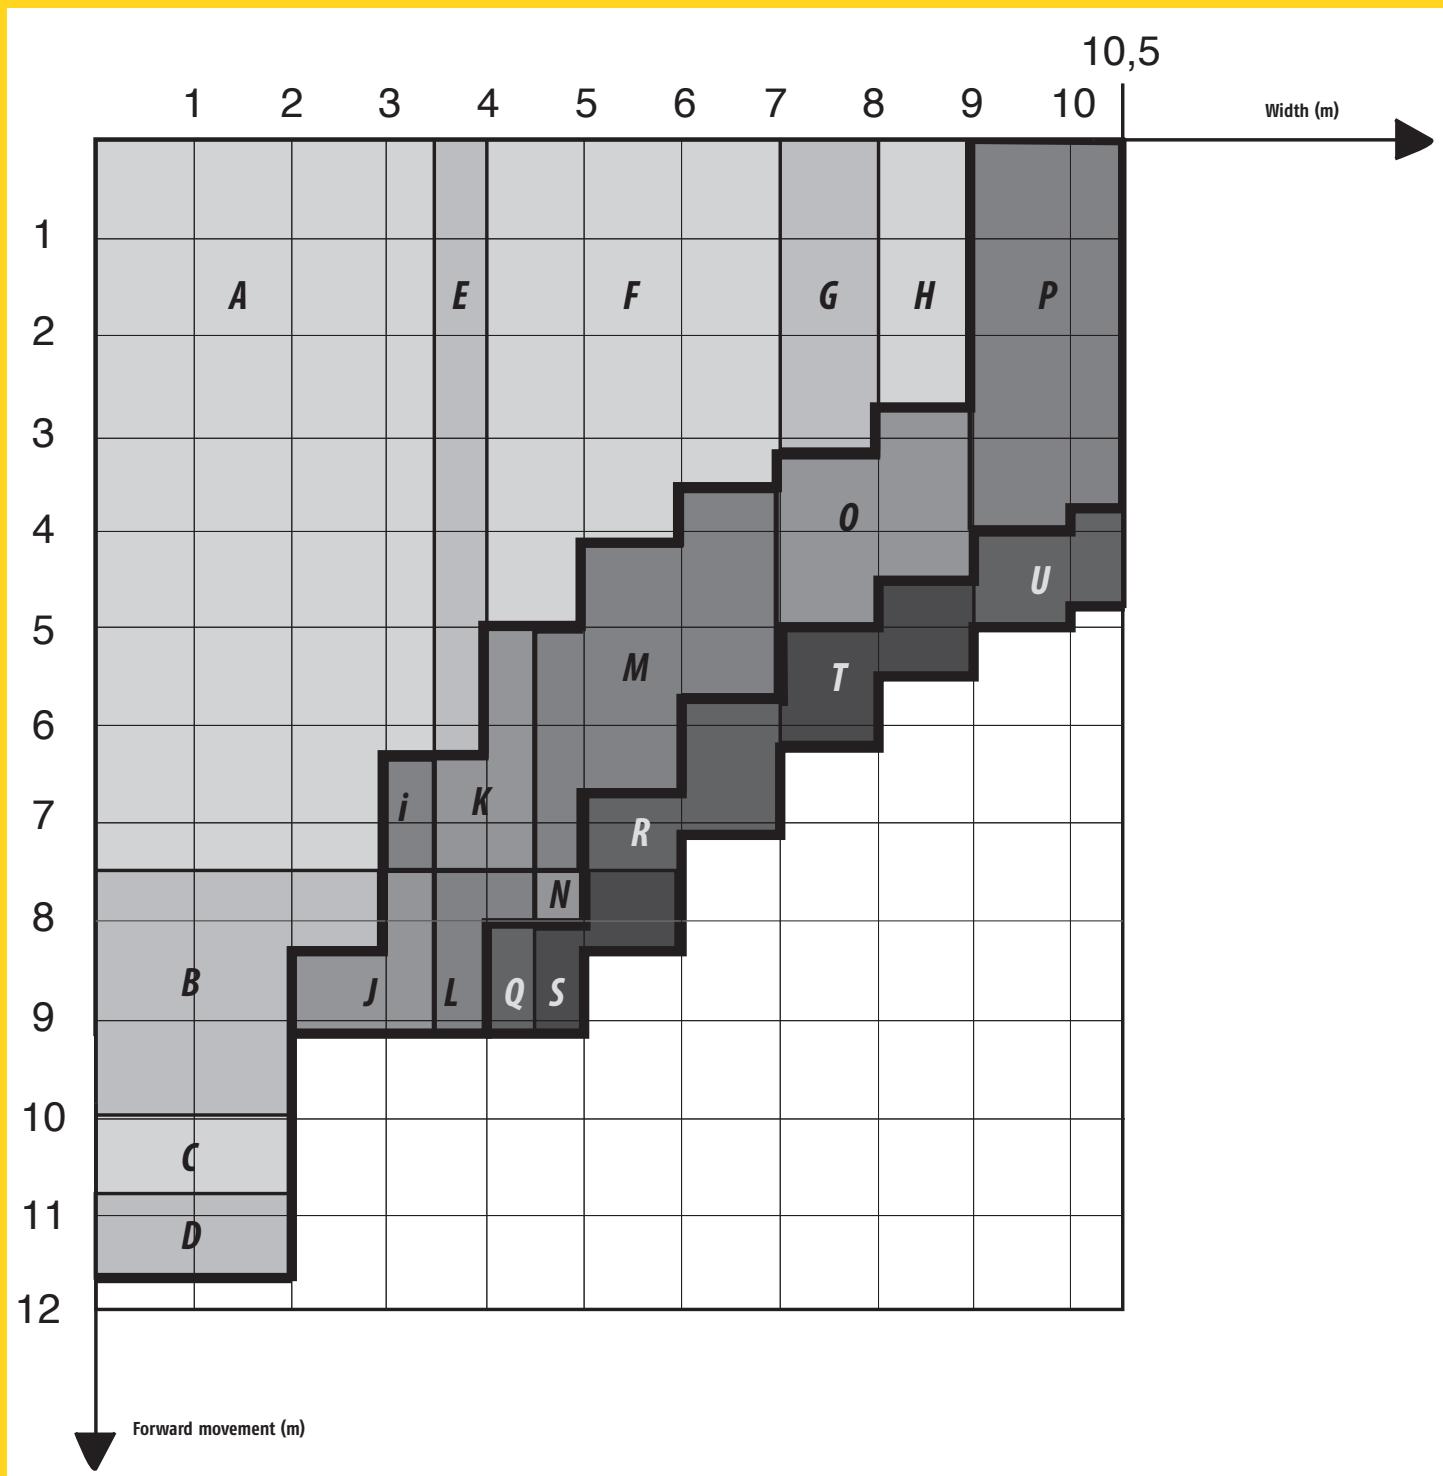

The maximum dimensions are given as a guide and will depend on the mechanical characteristics of the tubes and the load bar that are used.

Number of intermediate supports according to the width of the system:

Straps tube			Fabric tube	Ø 70 ridged	Ø 78 ridged
0	1	2			
0	1	2	Ø 63 x 1.5 mm		
0	1	2	Ø 70 ridged		
0	1	2	Ø 78 ridged		
Width in metres	3.5	4.5	7.0	8.0	10.5
	4.0	5.0			

FTS charts (230v/50hz range motors)

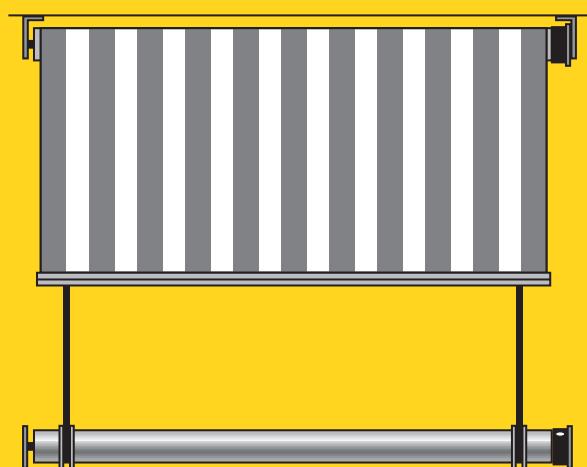

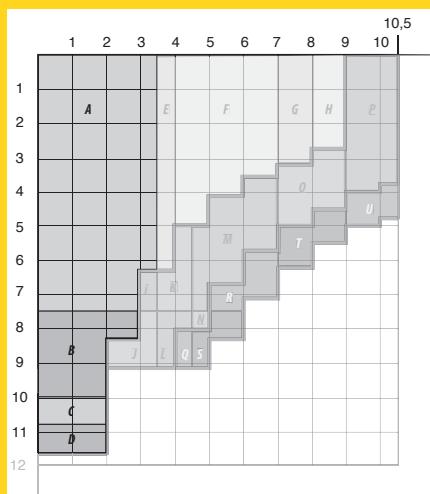

4. General charts with usage case - Europe range

Note: The different cases indicated above correspond to accessory lists developed on the following pages.

10. Case i - J (FTS LT60 55/17)

Description	Part number	Case i	Case J
FTS LT60 55/17	1185000	2	
FTS Hi-Pro unit	1822009	1	
Wheel Ø 63 (*)	9206019	3 (1 for strap actuator + 2 for end piece)	
Adapter set Ø 78 (*)	9420327	1	
Actuator bracket	9430601	2	
End piece bracket	9430603	2	
Heavy load end piece	9420674	2	
Wheel Ø 78 (*)	9761001	2 (for end piece)	
Ratchet tensioner	9430606	2	
Strip Ø 5 (3 metres)	9146040	2	1 (width < 3m) 2 (3 m ≤ width < 3.5 m)
Strip Ø 6 (3 metres)	9146268	2	1 (width < 3m) 2 (3 m ≤ width < 3.5 m)
Pulley Ø 63 / Ø 130	9146071		
Pulley Ø 63 / Ø 160	9146072	2	2
Black strap 15 metres	9146046		
Black strap 20 metres	9146047	1	1
Black strap 50 metres	9132077		
Cable guiding accessory	9430611		1
Stainless steel cable 30 metres	9430607A		1
Control system			1

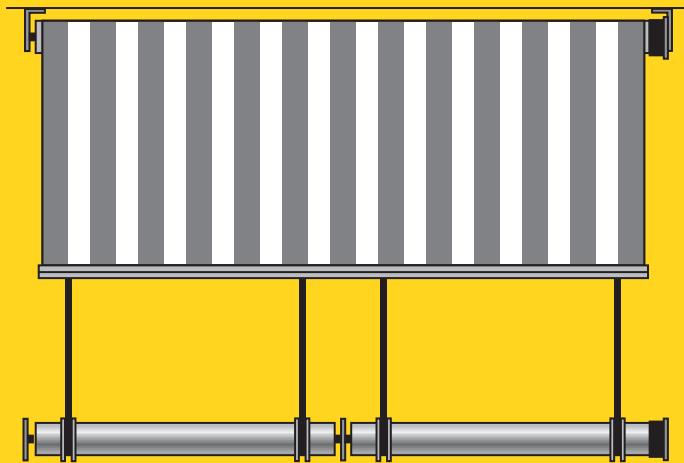

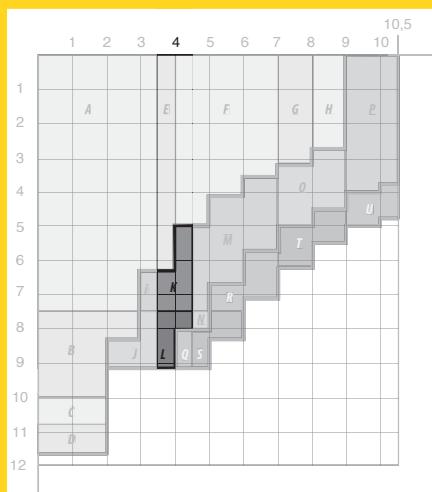

(*) see note 1

Note:

- When using different tubes, it is necessary to modify the adaptor references.
- This accessory list does not include the load bar (not supplied by Somfy).
- For the control system, see the list of double push buttons or the list of automated systems compatible with the FTS system.
